Trip Schedule

Free Flow

Buddies

Welcome to this edition of Freeflow, As the dive season winds down to a close we start preparations for the Xmas bash and the quiz night, so get your money to Nigel and get your tickets.

Even though the dive season is over doesn't mean we put our gear away and forget about getting wet until next March. Keeping dive fit through the winter is something to be recommended, be it at Stoney or further afield.

We also welcome the new committee, since the last edition of Freeflow, with Mike, the new training officer, really getting stuck into the job. Let's remember that the officers of the club give their time voluntarily and offer as much help and support as possible.

PeteB

It is worth remembering that many of our dive trips involve a considerable amount of travel. This is therefore a credit to the club that goes to all parts of the UK every year.

Chairman Freeflow Nov 2010

Hello Buddies and welcome to another edition of freeflow. You will be glad to know my ramblings will be short this month!

Unfortunately we had a member of the extended LSAC community pass away this week. Whilst I did not know Lewis personally I would like to offer my thoughts to the O'Driscoll family and also those who were close to the family.

The club has been extremely busy over the last few weeks with lots of training in core Ocean and Sports courses as well as a Boat Handling. It is great to see the club pulling together and to have lots of new members progressing with their diver education.

As we have discussed before work has started to encourage links with other clubs in the area. We are hoping this will create a pool of divers for the 2011 season and will, with preference to LSAC members, create a pool of divers to 'put bums on tubes' so to speak for dive trips. I will keep you updated with our progress.

A few weeks from now we will hold an open evening to follow on discussions from the AGM back in September. I would like to encourage all members to attend to have a say in how the club will progress over the next 12 months.

The club has and currently is running at a budget deficit. The major costs being room and pool hire charges along with the cost of boats. As a committee we are taking the steps to minimise expenditure wherever possible, however any suggestions will always be welcome.

The fate of Skinny Dip is by no way certain however the stay of execution will run until the last possible day. Hopefully a good raft of trips in 2011, coupled with some SDC courses for other clubs will mean we retain two boats this time next year.

Unfortunately the annual dinner has not been as well supported as we had hoped. If you are not coming along this year I would be interested to hear why to allow us to better plan the next one. For those that are going along I am sure the evening will be a great event with many laughs and should allow a great opportunity to relax and have a drink or two more than would be permissible on a diving weekend.

The Christmas quiz has been booked for Tuesday 21st December at the Royal Oak in Bitteswell. Tickets are available from Nigel or Dave now.

DO's Bit

As this years dive season slows down we've seen a very successful boat handling course being run by our new Training Officer Mike Flatt (and his accomplice) which has resulted in 4 more boat handlers for the club. Well done to Chris Taylor, Jason West, Dave Jaques and Cecilia Warrior. As usual, what goes on a boat handling course stays on a boat handling course! All I can say is that an excellent time was had by all – thanks guys - you know who you are!

It is great to see some new members to the club, please take time to say hello to any new faces and make yourself known. It is refreshing to see so much training happening both at the school and at the pool. I look forward to our students progressing on to open water in the New Year.

I will be holding a trip planning evening shortly - keep a look out for the email. With all the interest being shown in training it would be nice to see this follow through in to next season's trips. Don't forget, if you have an idea for a trip or have somewhere you really want to go then put your suggestions forward, you don't even have to wait for the planning night. If you don't want to plan and run a trip we have plenty of willing helpers who will do take this on.

I look forward to seeing many of you at the awards dinner on the 27th and on the quiz night on the 21st December.

Safe Diving

Rich Hall
D O

WHEN THE SEA IS WELCOMING...

You will look for a wreck but decide that it is too hard to find. The change of plan means that the dive will probably be on boring flats. Instead you find a large artillery shell that is just waiting to be “bashed”, however as the sea is calm and flat you really don’t want to disturb it. On closer inspection you will also find that the flat muddy sea bottom is actually littered with scallops including those funny little ones that swim up to you like wind-up teeth and settle in the palm of your hand. The sea will continue to offer up gifts at regular intervals to keep you amused such as large spider crabs with all of its left legs missing, a lobster that is enjoying the day out of its hole and is not going to scamper back home just because divers are around. There will be ledges with creatures living in almost every hole and dogfish will be out for a stroll. Because the sea is

welcoming the best will be saved for last...you will find a ray sleeping on the sea bed that is quite happy for you to settle down beside it and have a good look, after all the ray will appreciate that it is a rare site in British waters.

The sea will provide you with a Cove to anchor in at lunch and ensure that you do not have to travel too far to your next dive site.

The wreck of the Black Hawk will be revealed immediately and the sea will ensure that other divers will leave the site after you have used their shot line. When you have reached the wreck the sea will have made sure that all of the fish shoals are there to welcome you and will even make sure that you can find your way back to the piece of metal where you tied off your SMB.

On days such as these you are reminded why diving is so much fun. These are days to appreciate because the sea does like to ring the changes.

WHEN THE SEA DOES NOT WANT YOU.....

It will let you know in advance that it is in a bad mood by allowing the wind to build it up into a swell that ensures you will not want to venture out of the harbour.

If you challenge the seas mood and decide to dive in the harbour itself, believing you will be safe from its bad mood then the sea will retaliate. First it will ensure that the visibility is ruined, if you really want to spend 20 minutes swimming round a landing craft trying to figure out where you are then that is your choice. However, if you get brave and venture out of the harbour then the sea will get annoyed. First it will warn you that it is grumpy – why is it so hard to get kitted up today? how did that knot get in the SMB reel? Why is my drysuit feed starting to leak? And finally the sea will take you on a “washing machine” drift dive that will convince you it really is time to call it a day.

Thanks to the following:

Chris Taylor & Kath Hall – For organising the trip to Weymouth

Rich Hall – For looking after the boat

Mike Flatt – For volunteering me to write the article

Neil Tomlin

22nd Sept 2010

Red Sea - Photographic Trip

When I missed out on the club trip to the Red Sea I looked around for a last minute deal and found one, which was also a 'photographic workshop'. The trip was based on the Northern 'Wrecks and Reefs' itinerary on board Cyclone (a boat I hadn't been on before!). The guide/photographic instructor was Mike Ward who has previously acted as a guide for one of the club trips. I went with my photographic buddy and

I had taken my faithful compact camera (Olympus SP350) and the majority of the photographic equipment in use on our boat were compact cameras in housings, with only my buddy sporting an SLR. Everything was digital... no film. (Out of interest on Whirlwind was a trip with lots of members of BSOU (British Society of Underwater Photographers) and that was mainly where the SLRs were!)

On the first evening Mike gave us a talk on the fundamental principals of photography and suggested we did some experiments to determine the optimum exposure (which may not be what the manufacturers think it is!) and to make sure we could white balance. He also set us the theme for the next evening's discussion and gave us some examples of what sort of pictures we could take. Over the week the themes were Wrecks (there's a surprise) Fish (another surprise!) Close-up/Macro, Buddies.

During the day Mike left us to our own devices - he was doing an extended range (Tri-Mix) course so he had his hands full! Those that wanted submitted pictures, which met the brief of the previous night, these were presented as a 'Critique' and shown (anonymously) and then discussed as to what was liked and what could be improved. Mike also chose his favourites from the pictures as his personal favourites.

The dives we were offered were: The Alternatives, Chrisoula K, Giannis D, Carnatic, Ulysses & Drift, Gubal Barge x 2, Thistlegorm x 3, Small Crack, Frazier, Jackfish Alley, South Laguna (x 2 Day & Night), Gordon Reef, Ras Peter.

This is a picture I submitted in the 'Wrecks' category. It was on the Chrisoula K just after we had got in, looking aft at the fallen mast and the loading arms and our buddies who were investigating them.

As many of you will spot, this is the stern of the *Giannis D*. At a meeting of EMUP (East Midland Underwater Photography group) I'd heard that the 'only' time to take this sort of photo was in the late afternoon. Well we were there at that time so I took the snap but was disappointed with the result (below) but the wonders of Photoshop gave me the result I was really after (left).

Fish... well, with the compact, and its shutter delay I struggled... it took me a lot of trying and many shots of just tails before I managed to get these half decent snaps of these Surgeon fish.

Of course with 'anemone' fish shutter lag is still a problem, but they don't move about as much as the surgeonfish! To get this grouping of this anemone (which was on the broken mid-ships of the *Giannis D*) took quite a few attempts. I'd never noticed the baby anemone fish before (right hand side) maybe because of their bland (simple black and white) colour.

Buddies: and my own buddy has always been a bit of a poser, these two snaps of him were on the Carnatic, the first (on the right) was on the bow, possibly not the best of shots, (especially with the distraction of the other

divers behind) but it shows him in location and his kit. The second one (with all the bubbles) was on the shot line during our safety stop.

White Balance: Whilst I had listened to Mike's talk saying how we should white balance. I'd always notionally agreed, but I also always shoot in 'RAW' which means I could always 'post process' to get the colours right. But I thought I'd give it a try. The picture on the right is of a red anemone (and fish) - close to the 'small crack' on the Small Crack dive. By carrying out a white balance I was able to get a much

more vibrant red in the anemone than if I took the same picture with flash no matter how I played with it afterwards! (my best result from that is shown on the left). So I'm going to be practicing white balancing and shooting in natural light.

On the last night Mike gave us a talk about post processing (playing with the photos later on the computer) and the main message I got from this was if you are struggling to get a reasonable colour for your photo, why not try removing the colour and making it Black and White. Here I've taken a picture of the wreck of the Livaboard 'Frazier' and I've tried to get the best colour but it was getting 'muddy' so I turned it to black and white. Which do you think makes the stronger photo?

Generally I found the trip was very enjoyable and it helped my photography. It was tailored to be suitable for all levels of ability so if you are interested in improving your underwater photography then you would benefit from one of these trips.

In the meantime I would suggest you follow a couple of Mike's hints:
1, Take a series of pictures at various exposures (under-exposed and over-exposed) to find out which one works best on your camera.

2, Make sure you know how to 'white balance' your camera, different

manufacturers use different methods, but once you have worked out how to do it, practice it - practice in the comfort of your living room until it becomes second nature.

Ian Jennings

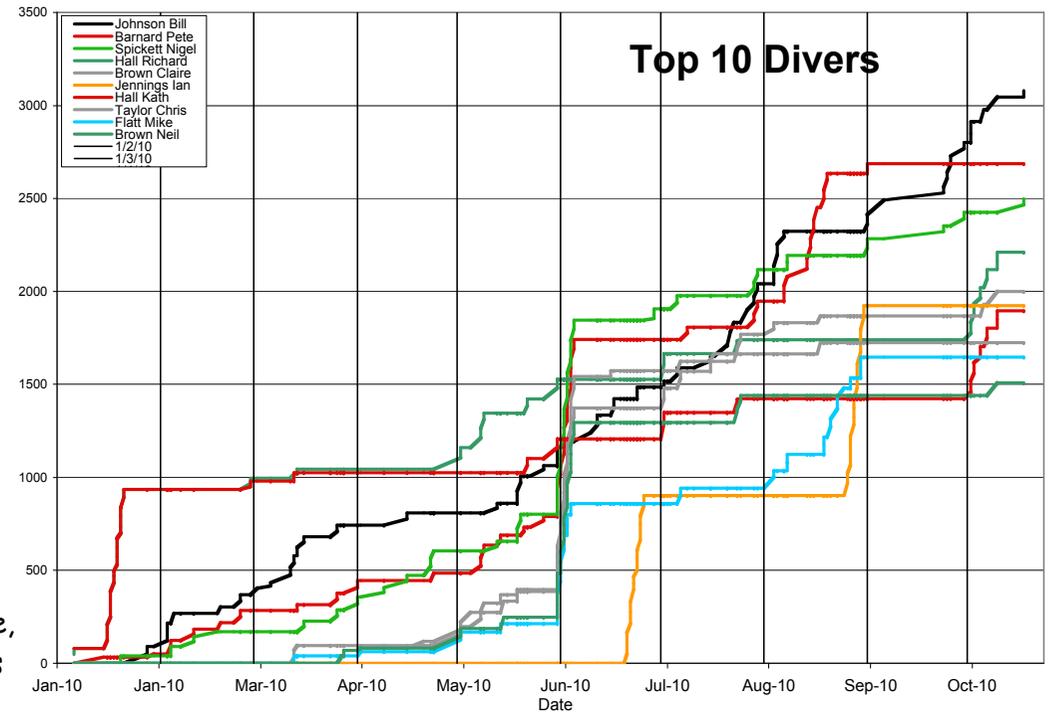

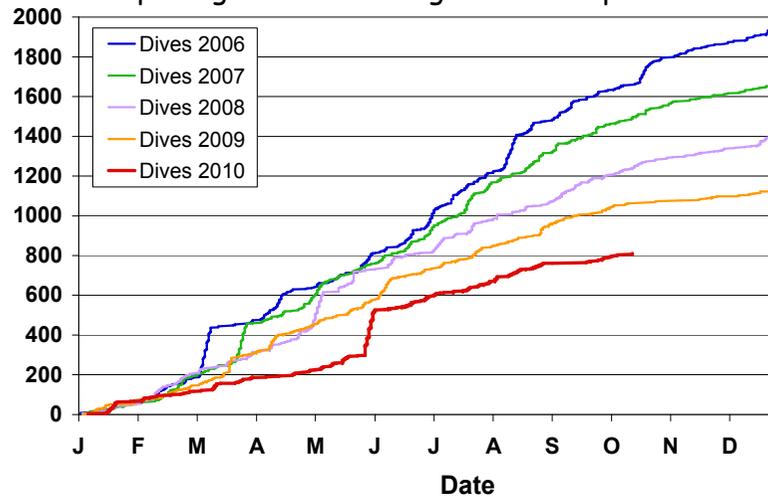

Members Dives 2010 - November Update

Hi again,

Another Month and more statistics... There's another leader of the time underwater table (Congratulations Bill).

As you can see from the chart on the right we have had a few 'leaders' this season, but Bill has made steady progress throughout the year and deserves his place. But there is plenty of time left to depose him if you want to!

The total number of dives in the year is unfortunately low - especially when compared to previous years. This is not surprising with the falling membership and the economic

climate, but (as I have

said before) there is still some excellent diving out there. Maybe we can get the total dives up towards 1000 dives.

Overleaf is the 'all important' chart showing all dives. As usual, if your records don't match up with these then let me know and we can compare notes.

Ian Jennings
